## INDUSTRIAL LIGHTING

Browse through images of illumination applied in various industries. Enabling good visibility and visual comfort for employees, in high bay warehouses or production plants, the industrial illumination is vital for any branch: food, beverages, heavy or light metal processing industry, logistics...

## PUBLIC LIGHTING

High frequency of vehicles and passengers in streets, intersections, airports, metro and railway stations require a special approach to lighting. Given the spaces are in full operation 24/7, longevity and little maintenance are very important features, next to optimal visibility and low energy consumption. All these installations can be integrated into Smart City solutions, including presence control, daylight savings and various other systems that ease and enhance the flow of people and vehicles.

## SPORTS LIGHTING

Sport is important in our lives: whether we watch professional matches, or we exercise to maintain healthy life, appropriate lighting is indispensable. In professional courts such as football terrains, swimming pools, rigorous standards (FIFA, UEFA, FIBA...) need to be met as a precondition to TV transmissions, while good illumination provides functionality and safety of recreational sport LIGHTING.
