MEDICAL LIGHTING

Medical lighting refers to healthcare institutions and pharmaceutical industry. The special spaces, such as clean rooms in operation theaters or production in pharmacy, are often in 24h use, with high sanitary standards. Due to full occupancy of the spaces, they require a long lifespan of the installed products.

HEALTHCARE INSTITUTIONS

General hospital spaces (lobby, reception, cafeteria) and special hospital rooms (examination, therapy, intensive care and operating blocks). First ones with lighting requirements similar to those of hotels, the latter ones with special preconditions. Lighting equipment features quick mounting, great lighting performances and energy savings.

PHARMACEUTICAL INDUSTRY

Given the importance of pharmaceutical industry in the modern world and the severity of regulations regarding pharmaceutical products, it is not surprising that the standards for this industry are most strict. This is why only the highest quality equipment must be installed in production plants, including the choice of lighting. Here is a selection of many completed project in this field.
